

Canada–Asia Energy & Strategic Industry Brokerage

Independent Platform · Calgary, Canada

PRE-INTRODUCTION MATERIAL · BEFORE NDA / NCNDA

EnerLink Group Inc. is an **independent brokerage platform** headquartered in Calgary, Canada. It connects Canadian LNG, LPG, natural gas and strategic-industry opportunities with buyers and partners across Korea and the Indo-Pacific. EnerLink does not own or trade resources itself; it handles protected introductions and early commercial coordination between the two sides.

Projects in this material are identified by **code name (Project Code)**. Actual company names, pricing, volumes, contract terms and technical materials are provided only **after an NDA / NCNDA is executed or written authorization is in place**.

What EnerLink Does

EnerLink Group Inc. is an independent energy and strategic-industry brokerage platform based in Calgary, Canada. It connects Canadian supply-side opportunities with Asian demand, operating as an **independent brand** rather than the representative of any single project. All commercial engagement proceeds on the basis of **written mandate and fee agreements** — not verbal commitments.

Canadian Side

SUPPLY ACCESS

Builds access to energy producers, LNG developers, LPG/propane supply channels, terminals, marketers and traders, and secures seller mandates.

Asian Side

DEMAND & VETTING

Identifies and qualifies buyers, investors, government/public channels and EPC/industrial-cooperation demand across Korea, Vietnam and Cambodia.

Structuring

DOCUMENT FLOW

Manages the full document flow — from first contact onward — using NDA/NCNDA, LOI, mandates and fee-protection agreements.

Independence

PROTECTION

Does not represent any single project; protects sensitive information before names are disclosed and prevents circumvention.

SECTORS

LNG • LPG • Natural Gas • Energy Infrastructure / Strategic Industry (Rail • Defense • Heavy • Marine Fabrication)

MARKETS

Korea • Vietnam • Cambodia and the Indo-Pacific

BASE

Calgary, Canada — close to producers, developers and the energy network

What EnerLink provides is not merely an introduction, but **the management of what is disclosed at each stage, under which document protection, and with which qualified counterparty**. Its foundation is access to Asian demand that supply-side players rarely hold on their own.

Canada–Asia Energy Context

Why this connection matters now

Pacific-coast Canadian supply offers Asian buyers a **route that avoids conflict straits**, geopolitical stability, a long-term resource base and a low-emission energy-transition narrative. Three consecutive years of supply-chain shocks have exposed the fragility of existing Asia-bound energy trade routes.

Supply-Chain Shocks (Past 3 Years)

2023–24 Panama Canal drought sharply reduced transit volumes

2025 Suez Canal — conflict disrupted transit

2026 Persian Gulf — conflict affected a significant share of regional LNG flows

→ **Canada's Pacific-coast route passes through none of these conflict straits.**

Two Time Horizons EnerLink Works Across

LNG

Long-term

Long-term offtake, equity participation and project partnerships. First cargoes target the 2030s, so a **framework (MOU/LOI) stage** is more appropriate than an immediate transaction.

LPG

Short-term

Near-term demand in Vietnam and Cambodia. Relatively fast transactions are possible by matching North American suppliers, traders and terminals.

Industry

Parallel

Connects rail, defense, heavy-industry and marine-fabrication capability with energy-infrastructure EPC and fabrication demand.

EnerLink's role is to give Canadian suppliers **a path into Asian markets**, and Asian buyers **a vetted supply source and a stable route**. The basis for intermediation is the cross-side access neither party easily holds on its own.

■ Geopolitical Stability

A stable supply route that avoids conflict straits, plus Canada's political and institutional reliability.

■ Pacific Access

Direct access on the shortest North America–Northeast Asia route, supporting delivered-price competitiveness.

■ Low-Emission Transition

An integrated-infrastructure narrative extending from LNG to blue ammonia, CCS and low-carbon power.

Staged Information Disclosure

What is shared now, and what is shared after NDA/NCNDA

EnerLink does not disclose information all at once. At the pre-introduction stage it explains the structure and context of a transaction; sensitive information such as company names, pricing and volumes is provided only after an NDA/NCNDA is executed. This procedure protects seller and buyer equally.

Shared at this stage

BEFORE NDA / NCNDA

- Opportunity type and sector (LNG · LPG · Natural Gas · Strategic Industry)
- Country/region and transaction-structure overview
- EnerLink's role and current stage
- General range of volumes and delivery terms
- Counterparty qualification criteria

Provided after NDA / NCNDA

AFTER PROTECTION

- + Actual company and project names
- + Specific pricing formula and payment terms
- + Confirmed volumes and supply schedule
- + Technical specifications and engineering materials
- + Direct connection and protected meetings

Even before names are disclosed, the information above is enough to assess the substance and suitability of a transaction. **Further information is provided after an NDA/NCNDA is executed.**

■ Seller Protection

Supply source, pricing and technical materials are released in stages — never without protective documents.

■ Buyer Protection

Qualification and authority are confirmed first, so buyers are not exposed to unvetted supply or circumvention.

■ Intermediary Protection

NCNDA, mandate and fee agreements ensure the value of the introduction is not bypassed.

Active Project Portfolio

Code • Sector • Region • Role • Stage — names provided after NDA/NCNDA

Code	Sector	Region	EnerLink Role	Stage
PROJECT NORTHGATE	LNG Export Development Platform	Western Canada (BC)	Seller-side advisory & introduction — connecting Asian long-term offtakers and strategic investors	Pre-FEED • Counterparty screening
PROJECT KEYSTONE	Natural Gas / LNG Supply	Western Canada (AB)	Exclusive Seller's Mandate — sourcing, matching and negotiation support for Asian buyers	Mandate signed • MOU stage
PROJECT SENTINEL	Strategic Industry (Rail • Defense • Heavy)	South Korea	Representation & introduction of a Korean strategic group to overseas government / public / private partners	Early market access
PROJECT HARBOR	Marine & Heavy Fabrication	Vietnam	Representation of a Vietnamese industrial partner — linking to Canadian / Korean energy & infrastructure projects	Capability matching • EPC linkage
PROJECT MONSOON	LPG Short-term Demand	SE Asia (VN • KH)	Demand-channel development — matching North American suppliers, traders and terminals	Demand confirmation • Volume review
PROJECT FRONTIER	LNG Framework (nascent market)	Cambodia	MOU/LOI framework facilitation — connecting long-term demand counterparties	Framework agreement stage

Stage labels

Mandate secured **Active** in progress **Early** initial review

The code names above protect actual counterparties. Each project's company name, project name, pricing, volume and contract terms are provided after an NDA/NCNDA or written authorization — and EnerLink protects **your information under the same principle**.

Canadian Energy Offtake

LNG and natural-gas supply opportunities in Western Canada. Acting on seller-side mandates, EnerLink connects Asian long-term offtakers and investors — long-term LNG at the framework stage, and gas/LNG supply scaling from a test cargo to long-term contracts.

PROJECT

NORTHGATE

LNG Export Development Platform

Western Canada

British Columbia
Pacific Coast

ROLE

Seller-side advisory & introduction. Introduces the project to pre-vetted Korean/Asian long-term offtakers and strategic investors and coordinates early discussions.

STAGE

Pre-FEED; selective discussions with screened counterparties. First cargo targeted for the early 2030s.

SHARED NOW

Large-scale floating LNG platform (~12 MTPA), a Pacific direct route avoiding conflict straits, phased expansion, and potential extension to low-carbon ammonia and AI infrastructure.

STRUCTURE

Long-term offtake or equity participation. Begins with a framework (MOU/LOI) ahead of an SPA, expanding volume with phased build-out.

PROJECT

KEYSTONE

Natural Gas / LNG Supply

Western Canada

Alberta

ROLE

Exclusive seller's mandate. Sources and qualifies eligible Asian buyers and coordinates proposals and negotiations on the seller's behalf.

STAGE

Seller mandate executed. MOU/term-sheet stage scaling from test cargo → monthly supply → mid/long-term contract.

SHARED NOW

Initial test cargo plus monthly supply structure, CIF/FOB delivery options, the range of the pricing formula, and the payment (L/C) structure. Specific figures after NDA/NCNDA.

STRUCTURE

A test cargo builds trust, then monthly and mid/long-term contracts. The fee is embedded in the price structure under the seller mandate.

On Canadian energy projects EnerLink acts under **seller-side mandates**. Rather than immediate cargo procurement, it focuses on long-term relationships with Asian demand and protected introductions; specific terms are disclosed in stages after NDA/NCNDA.

Strategic Industry & Marine

Beyond energy transactions, EnerLink handles Korea's strategic industry (rail, defense, heavy industry) and Vietnam's marine and heavy-fabrication capability. Both connect to the EPC and fabrication demand of energy-infrastructure projects, forming a cooperation pathway beyond simple commodity trade.

PROJECT SOUTH KOREA		PROJECT VIETNAM	
SENTINEL		HARBOR	
Strategic Industry (Rail · Defense · Heavy)		Marine & Heavy Fabrication	
ROLE	Representation & introduction of a Korean strategic group. Supports market access and partnership discussions between Korean rail/defense/heavy-industry firms and overseas government, public and private partners.	ROLE	Representation of a Vietnamese industrial partner. Links shipbuilding, ship repair, offshore structures, heavy steel fabrication and module fabrication to Canadian and Korean energy/infrastructure projects.
STAGE	Early market-access and partnership discussions. Reviewing export and local-cooperation models.	STAGE	Capability matching and EPC/fabrication linkage — addressing load-out, offshore structures and LNG-related module demand.
SHARED NOW	Capability areas (rolling stock / track systems, defense platforms, heavy-industry fabrication) and scope of interest in overseas government projects and export cooperation. Company name after NDA/NCNDA.	SHARED NOW	160+ years of shipbuilding/marine history, a 65 ha yard, ISO/ASME certification, capacity up to 12,500 DWT, offshore structures, and a ~1,500-person workforce. Company name after NDA/NCNDA.
STRUCTURE	EnerLink connects the firm's overseas expansion with government, public and private channels, via NCNDA / mandate-based introductions.	STRUCTURE	Connects Vietnamese fabrication capability as a supplier into the EPC/fabrication package of energy projects, including logistics and load-out.

Strategic industry and marine fabrication matter most when combined with energy infrastructure. EnerLink links Korean and Vietnamese industrial capability to the **EPC/fabrication demand** of Canadian and global energy projects, creating a cooperation pathway beyond commodity trade.

Southeast Asia Demand

Southeast Asia is where EnerLink handles short-term demand and a nascent market together. LPG demand in Vietnam and Cambodia is relatively near-term, while Cambodian LNG is still early — better suited to a framework agreement than immediate offtake.

PROJECT		SE Asia
MONSOON		Vietnam · Cambodia
LPG Short-term Demand		
ROLE	Demand-channel development and matching. Connects near-term LPG demand in Vietnam and Cambodia with North American suppliers, marketers, traders and terminals.	
STAGE	Demand confirmation, volume review and import-terminal-condition review. Supply-side matching in progress.	
SHARED NOW	Demand region and immediacy, supply routes under review (propane / LPG export routes), and general terminal/shipping-structure conditions. Specific demand sources after NDA/NCNDA.	
STRUCTURE	Matches short-term spot or short-term contract demand with North American supply; transacts after aligning terminal and shipping conditions.	

PROJECT		Cambodia
FRONTIER		
LNG Framework (nascent market)		
ROLE	MOU/LOI framework facilitation. Acting on a Canadian LNG seller-side mandate, connects with long-term demand counterparties in Cambodia for a framework agreement.	
STAGE	Early-market stage where a framework (MOU/LOI) suits better than immediate offtake; tied to the formation of long-term demand.	
SHARED NOW	Framework suitability and the fit between Canadian LNG's 2030s supply schedule and Cambodian long-term demand. Counterparty names after NDA/NCNDA.	
STRUCTURE	Secures the relationship via MOU/LOI at the early-market stage, converting to offtake as long-term demand forms.	

Southeast Asia hosts both short-term LPG demand and a nascent LNG market. EnerLink distinguishes near-term transactions from long-term frameworks and approaches each market with a structure suited to its maturity.

Transaction Process

From interest to protected introduction — document protection at each step

DOCUMENT TOOLS

EnerLink first confirms not "who the counterparty is" but "whether the stage is ready for disclosure." This sequence protects both seller and buyer, and every commercial commitment proceeds on the basis of **written documents** rather than verbal agreement.

Next Steps

NEXT STEPS

- 1 Confirm area of interest and demand scope
- 2 Confirm decision-maker and mandate
- 3 Execute NDA / NCNDA
- 4 Disclose company names, technical materials, volume and pricing formula in stages
- 5 Proceed with protected meetings and commercial discussions

■ Independent Intermediary

Operates from an independent position — neither producer nor buyer — and does not represent any single project.

■ Asian Demand Understanding

Understands energy, infrastructure and government channels in Korea, Vietnam and Cambodia, and explains them in the buyer's context.

■ Document-Based Process

All commercial engagement proceeds on written mandate and fee agreements, preventing circumvention.

■ Calgary Presence

Operates from the heart of Canada's energy industry, close to producers, developers and the network.
